MANUFACTURED EXCLUSIVELY BY **MILGO-SR**™ FOR DRI-EAZ® PRODUCTS INC.

DIRECTIONS FOR USE

CARPETS: Dilute MILGO-SR 1:8 (one pint per one gallon) and apply directly to the carpet with sprayer. Roll or brush into the fabric. Allow ten minutes contact time and follow with an extraction cleaning process.

CLEANING ADDITIVES: Add 1-4 ounces of MILGO-SR per gallon of cleaning solution for portables. For truck mount concentrate, use 16-32 ounces per gallon of water.

AEROSOLIZING: Dilute MILGO-SR 1:16 (one cup per gallon). Ensure complete respiratory protection and evacuate all others. Ventilate and allow one hour before re-entering the area.

FLOORS/WALLS: Dilute MILGO-SR 1:16 (one cup per gallon) and spray directly on affected areas with an 8002 jet. One gallon of diluted MILGO-SR will cover about 2000 square feet of non-porous surface area.

LAUNDRY: Add 8-16 ounces of MILGO-SR to the washer during wash cycle to deodorize urine, mold, mildew and sewer backup damaged fabrics. No detergent is necessary.

URINE ODORS: Dilute MILGO-SR 1:8 (one pint per gallon) and saturate all affected areas before and after cleaning and extraction. Speed-dry affected materials after treatment.

WATER DAMAGE: Dilute Milgo-SR 1:8 (one pint per gallon) for water damage from a sanitary source and saturate all affected organic materials. Allow at least ten minutes contact time.

SEWER BACKUP & RIVER FLOODING: Dilute MILGO-SR 1:4 (one quart per gallon) and saturate all affected areas before and after cleaning and extraction. Use proper ventilation; open windows.

CAUTION: KEEP AWAY FROM CHILDREN. Can be harmful if swallowed. If swallowed, consult a physician immediately. Avoid eye contact. If spilled into eyes, flush with water for 15 minutes. If irritation persists, contact a physician. Use only with proper ventilation. Use side shield safety glasses when mixing concentrate. Wear organic vapor respirator with pre-filter when misting or aerosolizing.

NEW STAIN RESISTANT FORMULA

MILGO-SR is a non-ionic odor neutralizer that does not contain any cationic compounds. It is the best formula for use on stain resistant and non-stain resistant carpets.

MILGO-SR is a professional strength odor counteractant and deodorizing agent. It is concentrated to reduce shipping costs and bottle disposal problems. MILGO-SR is a penetrating odor neutralizer with wide spectrum odor control.

MILGO-SR is effective on a wide range of malodors, including difficult mold and mildew odors associated with dampness, sewage, floods, urine, feces, perspiration, and decay. MILGO-SR is especially formulated for flood restoration and urine odor problems.

MILGO-SR is effective at neutralizing malodors on porous surfaces such as carpets, drapes, upholstery, bedding and mattresses. It is also effective for non-porous surfaces like walls, floors, for general space deodorizing, and against odors caused by decomposition.

METHODS OF APPLICATION

APPLICATION SYSTEMS: MILGO-SR can be applied with pump sprayers, electric sprayers, and wet (cold) foggers, injection and by hand washing with a sponge.

POROUS SURFACES: Porous surfaces such as carpets, rugs, fabrics, and other textiles should be completely saturated and remain damp for at least ten minutes.

NON-POROUS SURFACES: Non-porous surfaces such as drywall, plaster, tackless strip, concrete and other low-porosity or non-porous materials should be saturated with enough MILGO-SR to remain damp for at least ten minutes.

AEROSOLIZING: All application personnel should have complete respiratory protection. Evacuate all others (including pets) from the area. Treated areas should be adequately ventilated and not to be re-entered for at least one hour after treatment.
