

DriForce Accessory Kit

Dry inside walls without damage

When used with the [DriForce Airmover base unit](#) (purchased separately), the Accessory Kit allows you to direct high-pressure air into wet wall cavities and other areas for fast, effective drying. You only need to make quarter-inch holes – this can usually be done behind the baseboards – to introduce warm, dry air into wall cavities, behind cabinets, tubs, under stairwells, and more.

Are you new to the DriForce System? We recommend the complete [DriForce Interair Drying System](#), which includes the airmover base unit and all the components of the Accessory Kit described here.

Item #F211-AK
